Introduction

According to the Central Bank of Chile's ("Central Bank") December 2023 Monetary Policy Report, inflation in Chile continued to recede during 2023 and the forecast is that further decreases will be observed in 2024, by an estimated 3% in the second half of this year. In line with this decline, the Central Bank's monetary policy interest rate shows an aggregate reduction of 300 basis points since July 2023 and stood, as of December 2023, at 8.25%. In order to reach the estimated inflation rate, the Central Bank considers that further cuts to the monetary policy interest rate will be required in 2024, the extent and timing of which will take into consideration the evolution of the macroeconomic scenario and the potential consequences for the course of the inflation rate. A continued reduction in the inflation rate, together with lower interest rates, will likely see a moderate increase in economic growth and in banks' and other financial institutions' lending activities and general financial operations.

In keeping with the expected recovery in economic growth, lower interest rates and increase in banking activity, Chilean Congress and regulatory entities kept busy during 2023 in banking and financial matters, discussing and enacting regulations aimed at keeping up with international requirements and standards, expanding competition and innovation and generally protecting investors and clients, even in the climate of uncertainty implied by the second constitutional reform process carried out in Chile last year and rejected by citizens in the December 2023 referendum. As a result of such rejection, the 1980 constitution will remain in force, with the Chilean government announcing that the process for creating a new constitution was closed and that no actions on this issue would be presented for the rest of the current presidential term, which ends on March 11, 2026.

An example of recent new banking regulations is the activation by the Central Bank of the countercyclical capital requirement by 0.5% of the risk-weighted assets as a preventive measure against external financial uncertainty. The deadline for Chilean banks for meeting the capital requirement is May 2024 and is intended to allow banks to accumulate a capital buffer that will be available in case of severe stress scenarios.

On the other hand, the CMF (as defined below) has moved forward with the gradual entry into force of Law No. 21,521, known as the "**Fintech Law**", by enacting General Rule No. 502, to become effective on February 3, 2024, which establishes the requirements generally applicable to the registration, authorisation, and obligations of financial service providers under the Fintech Law. The Fintech Law, enacted in January 2023, promotes competition and financial inclusion through innovation and technology in the provision of financial services by establishing a regulatory framework for services based on fintech technologies

and creating an open banking system that allows the exchange of customer information between different financial or related service providers.

All in all, these new regulations, along with some other legislative and regulatory developments discussed below, generally aim to improve the Chilean banking system to maintain the country's status as one of the best and more reliable investment destinations in the region.

Regulatory architecture: Overview of banking regulators and key regulations

Regulators and key regulations

The Central Bank is an autonomous entity, whose main purpose is to safeguard currency stability and proper functioning of internal and external payments. In the exercise of its constitutional mandate, it is vested broad regulatory powers regarding foreign exchange transactions, and monetary, lending and financing matters.

Furthermore, working closely with the Central Bank and supervising proper fulfilment of some of its regulations, the Financial Market Commission or “**CMF**” is the main regulator of the banking industry.

The CMF was incorporated on February 23, 2017 by Law No. 21,000, and on June 1, 2019 it replaced and assumed, among others, the authorities of the former banking regulator: the Superintendence of Banks and Financial Institutions.

The CMF's main mission (which is the basis for its regulations) is to supervise proper operation, development, and stability of the Chilean financial market (including banks), and to ensure that entities under its supervision comply with the laws, rules, bylaws, and applicable regulations.

The Central Bank's main mission is to oversee the currency's stability and proper operation of internal and external payments.

The Chilean banking system is based on the General Banking Act of 1997. The General Banking Act was materially amended in January 2019, introducing several innovations on supervision, and adjusting banks' capital requirements and other obligations to the standards set out in Basel III.

Since banks must be incorporated as special corporations, Law No. 18,046 (the Corporations Act) also applies to banks (with certain exceptions), mainly regarding corporate governance.

In addition to the above, both regulators have enacted several regulations, of which the most important are:

- CMF: Updated Compilation of Rules (*Recopilación Actualizada de Normas*), mainly issued by its predecessor (i.e., the Superintendence of Banks and Financial Institutions).
- Central Bank: Compendium of Financial Regulations and Compendium of Foreign Exchange Regulations.

Restrictions on the activities of banks

Only entities authorised under the General Banking Act can perform core banking activities in Chile. Financial activities that are not regarded as core banking activities are permitted without a banking licence (for example, lending, financial advice (not intermediation) and derivative transactions). However, financial advice has been increasingly regulated, as per the Fintech Law.

Banking services are understood generally as receiving, in a customary manner, money or funds from the public, to use it to grant loans, discount documents, make investments and

perform financial intermediation, while obtaining revenue out of this money and performing related activities permitted by law.

Article 69 of the General Banking Act lists the operations that banks can engage in, which include (among others):

1. Deposit-taking and accepting other repayable funds from the public.
2. Issuing bonds or debentures.
3. Lending (in its various forms).
4. Money brokerage, intermediation or brokerage of trading and debt instruments.
5. Issuing letters of credit and performance bonds.
6. Entering into derivative transactions, money collection, payment and transmission services.
7. Trading money market instruments, foreign exchange, financial futures and options, exchange, and interest instruments.
8. Acquisition, sale and trading of debt or fixed-income instruments, and providing underwriting services related to the issue and placement of such securities and acting as a placement agent and underwriter relating to offerings of newly issued shares of the stock of public corporations.

Under Article 70 *et seq.* of the General Banking Act, banks are authorised to incorporate subsidiaries to perform the following operations or activities:

- Stockbrokerage, broker-dealers, management of mutual funds, investment funds or foreign capital investment funds, securitisation, and insurance brokerage.
- Leasing, factoring, financial advice, custody and transport of securities services, credit collection services and other financial services that the CMF, by a general ruling, deems ancillary to the banking business. Banks are also authorised to set up subsidiaries in the real estate business and managers of housing funds.

Additionally, banks are allowed, with prior CMF authorisation, to be shareholders or participate in banking support companies (*sociedades de apoyo al giro bancario*). These are companies whose sole objective is to provide services to facilitate compliance with bank purposes, and/or carry out banking activity other than raising money. Once the CMF has granted authorisation to a bank to incorporate or participate in a banking support company, the CMF cannot deny the same authorisation to another bank.

Recent regulatory themes and key regulatory developments

Fintech Law

One of the most important legislative changes is the passing of the Fintech Law, which was published in the Official Gazette on January 4, 2023. The Fintech Law seeks to establish a regulatory perimeter for certain services that are based on fintech technologies, such as crowdfunding platforms, alternative transaction systems, credit rating services, investment advice, custody of financial instruments, order routers and financial instrument intermediaries, which were not regulated or supervised by the CMF. In addition, the Fintech Law has created an open banking system that will enable the exchange of client information directly and securely between different financial or related service providers, through remote and automated access interfaces, provided express consent by the clients has been obtained.

The Fintech Law generally regulates alternative transaction systems, in some cases for the first time in Chile, such as the offer, quote and trade in cryptocurrencies and crowdfunding or crowdfunding platforms, and in other cases providing a more in-depth regulatory framework, such as advisory services for credit and investment, custody of financial instruments, order

routers and intermediaries of financial instruments. In any case, the focus of the law is on the regulation of services rather than on the regulation of the entities themselves.

The CMF plays a relevant role within the Fintech Law, as it is the governmental authority in charge of supervising the services regulated by law and is entrusted with issuing the regulations for the application and compliance of its provisions. Also, the CMF is required by law to issue regulations for the operation of the open finance system, to oversee compliance with the obligations of its participants, and monitor the operation of this system.

As a general rule, the Fintech Law provides that companies providing these services must have an exclusive line of business and comply with certain requirements in order to obtain authorisation to operate from the CMF, including, among others: (a) continuing reporting obligations to clients and the general public; (b) corporate governance and risk management obligations; (c) establishment of minimum permanent assets; and (d) conditions of suitability for the provision of credit and investment advisory services. These requirements apply in a differentiated manner among the different financial service providers.

Finally, in order to operate, companies providing fintech services must be authorised by the CMF and be registered in the corresponding registries.

As a general rule, the provisions of the Fintech Law entered into force on February 3, 2023 (i.e., 30 days after its publication in the Official Gazette), except for the provisions related to technology-based financial services and the open finance system, as well as other provisions that modify other regulatory bodies, which have their own rules of deferred entry into force.

In compliance with the mandate of the Fintech Law, on January 12, 2024, the CMF completed the first stage of implementation of said law, with the issuance of General Rule No. 502, which becomes effective on February 3, 2024. This regulation establishes in a single regulatory body the registration requirements, authorisation process and obligations applicable to all fintech service providers, including crowdfunding platforms, alternative transaction systems, intermediation of financial instruments, order routing, credit rating services, investment advice and custody of financial instruments. In line with the above, existing fintech service providers will have a period of 12 months from the issuance of the regulation (i.e., until February 3, 2025) to submit their respective applications for registration and authorisation before the CMF, except in the case of providers of investment advisory services, which must submit their registration and authorisation applications before February 3 of the current year. If fintech service providers do not comply with the above requirement, they must refrain from continuing to provide their services and will be allowed to perform only acts aimed at concluding their operations. The main topics covered by General Rule No. 502 are: registration with the CMF; requirements to obtain authorisation from the CMF to operate as a provider of fintech services; information and reporting obligations; corporate governance and risk management; minimum capital and required collateral; and operational capacity, among others.

The Fintech Law mandates the CMF to issue regulations for the implementation of the open finance system within 18 months from the publication of the Fintech Law, and such regulations must include a gradual implementation schedule for all participants. This regulation is still pending issue by the CMF.

Other regulatory themes and key regulatory developments

In August 2023, the CMF published the so-called “Guidelines for a Financial Conglomerates Law in Chile”, which would aim to place financial conglomerates under its supervision. The

document, although not yet binding, contemplates a definition of “financial conglomerate”, the obligation to follow a certain corporate structure and to report periodically to the CMF, and the requirement of transaction and corporate governance policies.

On August 29, 2023, the CMF published for consultation a regulatory proposal for a new chapter for its Updated Compilation of Rules, regarding the early regularisation of banks. The purpose of the regulatory proposal is to determine: (i) the form and deadline that banks will have to report to the CMF the occurrence of an event indicative of financial instability; (ii) the requirements to be met by the delegated inspectors or provisional managers; and (iii) requirements of suitability or technical capacity of the liquidator in case of mandatory liquidation.

On November 30, 2023, the CMF issued Exempt Resolution No. 9077, whereby it modified the category of transactions “expressed” in foreign currency to also include those “in” foreign currency (i.e., payable in foreign currency), which will be renamed as “transactions in foreign currency and expressed in foreign currency”. The foregoing is for purposes of determining the common interest rate and the maximum interest rate for both types of transactions. Prior to such resolution, the CMF only published the common interest rate and the maximum interest rate for operations expressed in foreign currency but payable in Chilean pesos. However, as a result of a Supreme Court resolution, the new category of “transactions in foreign currency and expressed in foreign currency” will be subject to the provisions of Law No. 18,010, on money lending operations, including rules on maximum interest rate. It is worth mentioning that, notwithstanding the provisions of the resolution, money lending transactions indicated in Article 5 of Law No. 18,010, including those that are agreed with a foreign or international banking or financial institution or those in which the borrower is a banking or financial entity, will continue to be exempt from the maximum interest rate.

Finally, Law No. 21.641, which strengthens the resilience of the financial system and its structures, was published in the Official Gazette on December 30, 2023. Among other things, this law improves the repurchase agreement (“REPO”) market and allows for a netting of obligations between the parties and gives them the status of “related obligations” (*obligaciones conexas*) for purposes of the bankruptcy reorganisation resolution.

Bank governance and internal controls

Governance and risk management

Banks in Chile must be incorporated as corporations, following the specific requirements in the General Banking Act and the Corporations Act. Every bank in Chile must be a special corporation (*sociedad anónima especial*) under the specific requirements of the General Banking Act.

Under the General Banking Act, the main body is the board of directors, entrusted with the direction of the bank and proper risk management. Directors cannot be both directors and employees of the bank.

The internal organisation of banks is mostly carried out by the board of directors, which must provide necessary governance of the banking entity through the senior management, committees, and policies.

All directors must fulfil several honourability and solvency requirements to be appointed as such. These requirements include: not being convicted of serious crimes described in the General Banking Act; not being sanctioned by infringements to market regulations;

and not being involved in serious conduct that may risk the bank's stability or the safety of its depositors. It is forbidden by law to set special requirements based on nationality or profession in order to be appointed as bank director, and notwithstanding the fulfilment of the abovementioned conditions, there are neither specific approvals from regulators nor certifications required in this regard.

The board must adopt necessary measures to remain informed of the management and general situation of the bank. The board must have at least five members and a maximum of 11 and must always be composed of an odd number of directors. The directors remain in office for three years and can be re-elected. The board must meet once a month.

Sound internal governance is measured in accordance with the CMF's Guide to the Banking Supervision Process. Pursuant to this Guide, the main objective of banking supervision is assessing the quality of risk management used by banks. This approach, according to the CMF, corresponds to a Supervision Based on Risks ("SBR") approach, which reflects the maturity of the banking industry in Chile.

According to the Guide to the Banking Supervision Process, the SBR approach is based on the following pillars that set standards for choosing persons with control functions, based on the levels of technical knowledge required:

- Government and supervision. The board of directors and the banks' committees must strongly promote the risk policy, requiring and receiving information to correctly assess the risks and apply agreements reached.
- Risk management framework. A clear demarcation of the policies and procedures decided by the board, which must be consistent with the bank's volume of business.
- Measurement and continuous monitoring of risk. This in turn includes:
 - risk quantification: review and evaluation of the bank's risk assessment methodologies, to determine whether these are duly documented, updated and consistent with the business depth and volume;
 - timely follow-up of risk: early warnings (constantly reviewed under established protocols) for risk detection and boundaries that limit the risks, with necessary analysis and bases for it;
 - risk information system: involving a management report structure, this must address the needs of the bank's different levels; and
 - independent review: internal independent and qualified auditing, with adequate depth and coverage. Its analysis approach should consider risk, compliance with internal policies and regulations, obtaining a recognised and validated opinion by different levels of the bank, and appropriate technological tools for developing their work.

Internal control

Chapter 1-13 of the Updated Compilation of Rules of the CMF defines corporate governance as a set of institutional instances, guidelines and practices that influence the bank's decision-making process, contributing, among other things, to the sustainable creation of value, within a framework of transparency and adequate management and control of risk. It classifies the banks according to their organisational rules as level A, B or C, with A being the most compliant with management proceedings.

The following aspects, among others, are considered by the CMF as inherent to good corporate governance and criteria for evaluating a bank's management:

- i. Establishing strategic objectives, corporate values, lines of responsibility, monitoring, and accountability.

- ii. Verifying the performance of senior management and compliance with policies established by the board of directors.
- iii. Promoting sound internal controls and effective audit.
- iv. Establishing proper disclosure mechanisms.

Outsourcing of functions

Banks in Chile are allowed to outsource certain functions, provided the requirements set forth by the CMF are complied with. Chapter 20-7 of the Updated Compilation of Rules of the CMF contains the rules applicable to outsourcing of functions. Certain activities of banks may under no circumstances be outsourced, such as: those related to raising funds from third parties outside the bank's offices; the opening of bank accounts; and functions related to internal controls of the banks.

Banks are required to assess all the risks associated with outsourcing functions and establish an outsourcing policy that appropriately addresses those risks, including a proper governance structure, a sound framework of applicable regulations and procedures, and an environment that allows the identification, control, mitigation, monitoring and reporting of such risks.

Any outsourcing policy should consider, in general, the following elements: (i) general conditions approved by the board of directors regulating the activities or functions that may be outsourced; (ii) continuity of business; (iii) safety of the bank's own information and its clients; (iv) observance of banking secrecy; (v) access to the information by the CMF; and (vi) the political risk (*riesgo país*) of the country where the service provider is located (with banks not being allowed, except under certain exceptions, to outsource services to companies located in a country that does not have investment grade).

The abovementioned Chapter 20-7 also sets additional regulatory requirements applicable to the outsourcing of data processing services and reinforced due diligence obligations when contracting cloud computing services.

Bank capital requirements

Following the recommendations of Basel III, the current regulations on capital requirements were updated by Law No. 21,130, which increased such requirements from both a quantitative and qualitative point of view to address the risks currently associated with banking activity. Main innovations in this regard can be summarised as follows:

1. **Capital requirement.** The minimum required level of effective equity is 8% of risk-weighted assets. The Tier 1 minimum capital requirement, corresponding to the composition of assets with the best loss-absorbing capacity, was increased from 4.5% to 6% of risk-weighted assets. This increase is achieved by incorporating an additional Tier 1 capital requirement equivalent to 1.5% of risk-weighted assets. Additional Tier 1 capital can be made up of preferred shares or bonds with no maturity (perpetual).
2. **Conservation buffer.** A conservation buffer of 2.5% of risk-weighted assets above the established minimum must be set, which must be made up of basic capital.
3. **Additional basic capital.** Supplementing this conservation buffer, the law incorporates an additional basic capital requirement of a countercyclical nature, which will be generally applicable to all banking companies incorporated or authorised to operate in the country, by means of which it seeks to mitigate the development of systemic risks. The Central Bank, depending on the phase of the economic cycle, can set this reserve at up to 2.5% of the risk-weighted assets, subject to the consent of the CMF. As indicated above, in 2023, the Central Bank activated this additional basic capital by 0.5% of the risk-weighted assets, to be implemented by banks within one year (i.e., up until May 2024).

4. **CMF authorities.** Additionally, the CMF is granted the authority to require basic capital or additional effective equity for up to 4% of the risk-weighted assets in those cases in which the legal requirements are not sufficient to cover the specific risks faced by a determined entity.

Banking liquidity requirements

Article 35 No. 6 of Law No. 18,840, the organic constitutional law of the Central Bank, empowers it to enact regulations and set restrictions applicable to the relationships between active and passive banking activities.

Based on the above, the Central Bank enacted Chapter III.B.2.1 of its Compendium of Financial Regulations, which sets rules on management and measuring of banks' liquidity positions. Even though local banks solidly endured the global financial crisis, the Central Bank introduced this rule to prevent future liquidity shocks.

In this regulation, the Central Bank has established minimum standards and requirements that shall be observed by banks, with the purpose of maintaining an adequate liquidity position, in both local and foreign currency, and that allow banks to properly fulfil their payment obligations in both regular conditions and in exceptional stress scenarios whose occurrence can be considered plausible.

Chapter III.B.2.1 states that the board of directors is responsible for setting the bank's liquidity risk tolerance, understood as the liquidity risk level that the relevant bank is willing to assume as a result of both the risk/return assessment of its global policies, and the manner as to which such risks are managed. For these purposes, the board of directors must adopt, lead, and oversee the implementation of a liquidity management policy (*Política de Administración de Liquidez*, or "PAL"). The bank's senior management is responsible for proposing to the board the PAL compatible with the nature, scale and complexity of the business and risk tolerance of the bank, enforcing and updating the PAL.

The PAL must contain stress tests, which must be performed at least quarterly, considering the structure of the bank's assets and liabilities, the scale and complexity of its operations, and possible effects on its cash flow and liquidity position. The PAL must also establish a formal contingency plan, setting the strategies to be adopted when facing a liquidity deficit in stress scenarios.

Under Chapter III.B.2.1 of the Central Bank's Compendium of Financial Regulations, the liquidity position is measured through the difference between expenses and income flows in and out of the balance sheet for a given period. This difference is called a term mismatch.

Banks must observe the following limits regarding term mismatches:

- The sum of all term mismatches for up to 30 days cannot exceed the basic capital.
- The same requirement must be met considering only flows in foreign currency.
- The sum of the term mismatches of up to 90 days cannot exceed twice the basic capital.
- Therefore, projected net cash outflows in 30 days cannot be higher than the equity capital of the bank, and projected net outflows in 90 days cannot surpass twice that amount.

The PAL shall be available at all times for CMF review and term mismatches, if any, must be reported by the bank to the CMF.

In 2020, the Central Bank's council introduced an amendment to these rules, by means of which it will be entitled to suspend or increase flexibility on the abovementioned limits, to the extent the term mismatches occurred during a national emergency or due to other serious exceptional cases.

Rules governing banks' relationships with their customers and other third parties

In their relationship with clients, the general rules applicable to each type of banking activity will apply. Therefore, banks need to follow the rules contained in the Money Lending Operations Act, which governs the lending business in Chile, setting out what is understood as a money-lending transaction, the rules governing accrual of interests and other matters (including a maximum interest rate (*interés máximo convencional*), applicable, as of November 30, 2023, also to money lending operations “in” foreign currency (i.e., operations payable in foreign currency)), the Consumer Protection Act (Law No. 19,496), and the Data Protection Act.

In addition, there are specific rules that govern the relationships of banks with their customers. Most of these specific rules are contained in sectorial regulations enacted by the CMF, such as those regarding bank hours, bank accounts, leasing and factoring operations, other banking operations, issuance of subordinated loans, etc. Banks are also required to observe lending limit regulations when dealing with customers.

Anti-money laundering regulations are also applicable in the relationship between banks and their customers. In fact, banks need to follow Law No. 19,913 (the Anti-Money Laundering Act), which sets forth the general framework on anti-money laundering. In particular, banks are required to report to the Financial Analysis Unit (*Unidad de Análisis Financiero*):

1. “Suspicious transactions” they are aware of.
2. Cash transactions exceeding US\$10,000, on a semi-annual basis.
3. Documents and antecedents required to examine a previously reported suspicious transaction, or one it has detected.

Law No. 20,393 extends to legal entities liability for criminal wrongdoings related to money laundering, financing of terrorism and bribery of civil servants. It is worth mentioning that on May 15, 2023, Chilean Congress approved the bill that systematises economic crimes and offences against the environment and innovates in a series of matters, including: (i) the systematisation of offences related to business activity under four major categories of crimes that correspond to so-called “Economic Crimes”; (ii) the creation of new offences (e.g., a new title has been incorporated into the Criminal Code called “Offences against the environment”, among others); (iii) the inclusion of new offences based on the crime of money laundering typified in Article 27 of Law No. 19,913; (iv) the establishment of new penalties and sanctions, as well as the strengthening of existing ones, seeking that custodial sentences are effectively complied with by those who are involved in the commission of an Economic Crime; and (v) the exponential growth of the number of predicate offences for which legal entities (including banks) may be criminally liable under Law No. 20,393. Regarding the growth of offences that may trigger criminal liability of legal entities, the new law renders companies – regardless of their size – liable for all offences included in the so-called “Economic Crimes” referred to above, even when they do not meet the requirements to be considered “Economic Crimes”. This means that the legal entity will be liable for more than 200 new offences. In addition, the new law changes the conditions for holding legal entities liable, by no longer requiring that the offence be committed in the interest or for the benefit of the legal entity: according to the new law, it is sufficient that the offence is committed by someone inside the company, or third parties that manage services for it, with or without its representation, and that the perpetration of the act is favoured or facilitated by the lack of an adequate crime prevention model.

The CMF requires banks, in addition to following the rules set forth in Law No. 19,913, to have specific anti-money laundering systems in place, which are based on the “know-your-

customer” system. Chapter 1-14 of the Updated Compilation of Rules of the CMF lists the main features that every bank’s “know-your-customer” system should contain.

Finally, with respect to sanctions applicable to banks in Chile, the Banking Law establishes that those banking entities that do not comply with the law, regulations and other norms that govern them, may be sanctioned in accordance with Law 21,000 mentioned above, without prejudice to the sanctions established in other legal bodies.

In line with the above, Law No. 21,000 establishes three sanctions for banks:

1. Censorship.
2. Fine for fiscal benefit, which may be, depending on the case, (i) twice the amount of the benefit obtained from the illegal transaction, (ii) 30% of the amount of the illegal transaction, or (iii) 15,000 UF (*Unidad de Fomento*), which corresponds to approximately US\$600,000 as of January 12, 2024.
3. Revocation of the company’s authorisation of existence.

The sanctions above are applied by the CMF, taking into consideration the seriousness of the infraction, the economic benefit obtained, the damage caused to the financial market, recidivism, the economic power of the offender and the collaboration provided by the offender in the investigation.

Diego Peralta

Tel: +56 2 2928 2216 / Email: dperalta@carey.cl

Diego Peralta is a partner at Carey and co-head of the firm's Banking and Finance Group. His practice focuses on the creation and structuring of financial products and financing for all kinds of businesses, both from the lender and the borrower's perspective, the purchases and sales of companies and the issuance and placement of debt and equity securities either in Chile or elsewhere, as well as financial regulatory matters.

Diego has been recognised as a leading lawyer in Banking and Finance by several international publications such as *Chambers Latin America*, *Latin Lawyer*, *IFLR*, and *Who's Who Legal*, among others. He was awarded Lawyer of the Year in Capital Markets (2022) and in Project Finance and Development (2018) by *Best Lawyers*.

Diego is counsel and member of the Executive Committee of the Inter-American Bar Association (IABA), member of the Advisory Committee on Capital Markets of the Chilean Ministry of Finance, founder, and member of the Advisory Committee of InBest and Arbitrator of the Center for the Arbitration and Mediation of the Santiago Chamber of Commerce. In 2015 he was part of the working group for a new General Banking Law in Chile, and between 2000 and 2007 he was a member of the Legal Committee of the Chilean Banking Association.

Diego graduated from Universidad de Chile's Law School.

Fernando Noriega

Tel: +56 2 2928 2216 / Email: fnoriega@carey.cl

Fernando Noriega is a partner at Carey and co-head of the firm's Banking and Finance and Capital Markets Groups. Additionally, one of his related areas is infrastructure and project development. His practice is focused on banking law, lending transactions, project financing, as well as issuance of debt instruments, capital markets and foreign investment.

Fernando has been recognised as a leading lawyer in Banking and Finance by prestigious international publications such as *Chambers Latin America*, *The Legal 500* and *Leading Lawyers*. During 2015–2016, he worked as a foreign associate at White & Case in New York.

Fernando graduated *summa cum laude* from Universidad de Chile's Law School and holds an LL.M. in Banking Law and Financial Regulation from the London School of Economics and Political Science.

Felipe Reyes

Tel: +56 2 2928 2231 / Email: freyes@carey.cl

Felipe Reyes has been an associate at Carey since 2022 and is a member of the Banking and Finance Group. Additionally, one of his related areas is infrastructure and project development. His practice focuses on banking law, corporate law, lending transactions and project financing.

Felipe graduated *magna cum laude* from Universidad Católica de Chile's Law School and holds a Certificate in Private Law from the same university.
